Initiative: Education  
PGPR uses symposia and workshops as one of the key tools to educate clinicians and researchers about health care needs of children in resource poor settings. Speakers and attendees at these sessions are from around the world, and attend as individuals and as members of academic organizations, NGO, government initiatives, professional societies, and industry. They take the information and the connections from the sessions back to their own communities. The immediate target population in each case are clinical and research medical professionals. The ultimate target population through these professionals are at risk infants, children and mothers, particularly in developing countries. The specifics of who delivers work on the ground depends on the clinician/researcher/NGO/inter-government or government agency which uses the information and connections from the symposia and workshops to inform how they will proceed. Outcomes from PGPR symposia and workshops are shared via the PGPR website, publication in peer-reviewed journals, publication elsewhere, reports to funding agencies, and reports to constituents. PGPR also raises the profile of global maternal-child health work and issues still to be addressed within the global community of clinicians and scientists, and beyond, by presenting The PGPR Award for Outstanding Contributions to Global Child Health. This award has been presented for the last three years to outstanding researchers whose work has significantly impacted on global maternal-child health.
